

CORPORATE FACT SHEET

Management

Robert Main, President
John Ennis, Chief Operations Officer
Madhu Kopparapu, Chief Technology Officer

Management Background

The principals at RJM Technologies have many years of experience building and supporting world-class project teams for large organizations such as Mobil, AT&T, and the Federal Government. RJM Technologies was founded to deliver this same Fortune-500 level of service to companies that need an outside expert opinion, a specific technical skill set, or additional resources to handle backlogs and internal projects.

Business Description

RJM Technologies is a leading provider of Project Management and Information Technology staff augmentation services that contribute significantly to improving our clients' bottom line. Like any other investment a company makes, investments in staff must provide a positive return. We believe in finding the best "A-player" consultants and staff that will provide real value and positive impact to achieve the company's business objectives.

Products/Services

RJM Technologies focuses on three service areas to make its clients successful: technology strategy and planning; software development & systems implementation staff augmentation; and technical support staff augmentation.

Our strategy services provide answers to the questions an organization has concerning its complex and critical information technology issues, as well as an assessment of the organization's strengths and weaknesses. Our high-end recruiting and staff augmentation services find the "A-players" for your team from program managers through software engineers and support staff.

Unique Expertise

The principals at RJM Technologies are seasoned executives with more than fifty years of combined business experience. As a result, each of our engagements is approached from the perspective of maximizing the positive effects our consultants and recruited staff can have on our client's bottom line.

Our strong business focus, business modeling skills and project management expertise ensure that our consultants complete their projects and engagements on time, within budget, and fulfill the client's business objectives.

RJM Technologies consultants have years of proven project management and technical experience with various tools and methodologies, including architectures such as Java, J2EE, Enterprise Java Beans, .NET, UML, use-case modeling, and XML. We have experts in object-oriented design and programming, component-based development, and data modeling / database design. We excel at designing, implementing and supporting IT infrastructures (networks, servers, desktops and software) that provide the level of reliability demanded by our clients' business operations.

Project Management Methodology

Our project management methodology includes processes and procedures for accurately defining the project team and their roles, a communication plan to actively and frequently communicate project status in clear and concise terms, a change management plan for managing project changes, and a defined risk mitigation strategy for early detection and resolution of obstacles that minimize the risk of not meeting milestones or project objectives.

Markets

Our mission is to find those organizations where an IT department or executive office needs outside 'top-gun' project management, business analysis, software development or other information technology assistance that must be delivered quickly, effectively, and at a reasonable cost. We also make an ideal prime or sub-contracting partner.

Our Approach

At RJM Technologies, we strive to become a trusted partner to our clients. Through this partnership, we are able to help our clients with consultants and staff that add significant value by helping to define their business goals, implement solutions that achieve those goals, and maximize their return on their staffing investments.
